LongReach releases FY2009 Forecast and announces \$1.3M of new contracts

- LongReach releases positive forecast for FY2009 financial performance
- C4i received order from Dubai Airports for the supply of communications system for Dubai International Airport emergency response services

24 June 2009: The Board of LongReach Group Limited today released forecast results for FY2009. After a number of years of one off transactions the LongReach Group is in a position to release a forecast based solely on the performance of its primary subsidiary, C4i. The LongReach Group expects revenue in the range of AU\$12.8M to AU\$13.1M with EBIT in the range of AU\$1.0M – AU\$1.4M, depending on finalisation of impairment tests on intangibles.

C4i Pty Ltd, a wholly owned subsidiary of the LongReach Group, was awarded a contract by Dubai Airports for the turn key supply of its IP based Alarmon Switchplus Communications system at Dubai International Airport. The contract is valued at over AU\$560K and will be delivered later this calendar year.

“C4i is offering its world class IP based Switchplus Alarmon product for this Fire and Emergency response application. The Alarmon product provides niche communications and control capabilities to the emergency response operators of this large international airport. C4i has a long history with Dubai International Airport and is proud to be part of the continued improvement and growth of this international airport. C4i recently successfully completed site acceptance work at Abu Dhabi International airport for a similar system.” said Peter Harrison, Managing Director of C4i.

C4i also secured further orders this month valued in excess of AU\$700K for the provision of mobile dismount systems to be used in vehicles by the United States military and New Zealand army. The Switchplus Mobile-Dismount systems enable access to multiple radios, radios bridging, remote control and also integration of IP telephones. The functionality is based upon C4i's Radio Interface Unit - a compact, 4-port radio gateway with an embedded SIP server and serial ports for remote control. C4i's Switchplus Mobile-Dismount system offers significant performance minimizing size, weight and power requirements.

The referenced contracts all use the latest C4i IP based technology which has now been delivered to customers in Australia, America, Europe and Asia. C4i continues to advance its product offering through its on going research and development program.

For 20 years, C4i has specialized in delivering standard-setting communication solutions for mission-critical military and government customers around the globe. C4i is based in Melbourne, Australia and Reston, Virginia, USA, and has representatives around the world.

LongReach Group Limited (ASX Code: LRG) is a leading ASX-listed provider of integrated information and communications technology based products and services to the defence, security and intelligence sectors, as well as to government, telecommunications and corporate customers, both locally and internationally.
